Thank you for all the positive input I have had for our first newsletter. It's been fun and interesting to do. I will try to keep it current and enjoyable.

It's great to see the heralds of spring returning to Saskatchewan. The unerring flocks of geese gracing our skies (see cover) and their unmistakable honking breathes fresh life into our souls, after a long winter and evokes our dormant need to be out in nature playing in the dirt and enjoying the green or greens. Gardeners and golfers rejoice!!

Early this spring, Jan 12th we witnessed, through the media the great human tragedy of the earthquake that devastated the already impoverished, struggling nation of Haiti. It was gut wrenching for us and a living nightmare for it's people, unimaginable for us in our stability. Our hearts, hope and support go out to the survivors.

If there is anything positive to be gleaned from this catastrophe it's that the world responded with whatever it had, be it funds not only raised by countries and superstars, but from the richest to the poorest giving what they could; donations poured in. Manpower in the form of "Doctors without Borders", the Red Cross, the army and the journalists that brought this heartbreak into our livingrooms mobilizing us to act; and thousands of volunteers did; and still are.

Closer to home we had our annual Kinsmen Telemiracle, running now for the past 34 years and raising upwards of 81 million, 4 million this year alone. This is incredible considering the size of our population offset by our capacity to care and share. *Be proud Saskatchewan!!!*

AND in B.C we showcased the Olympics from spectacle to early tragedy, to dreams set in motion through aspiring athletes from all over our great country making it to the world stage, ready to give everything they have to achieve their goals. Youngsters supported by caring parents, inspiring heroes: family, teachers, mentors, coaches, sponsors and volunteers who sacrifice their time, spirit and contributions to make a difference. Canada came through, with tenacity, hard work, humility and fair play. We sang the anthem as a nation, proud to be Canadian eh!

Please submit any wishes and concerns to our "letter to the editor" section which we are hoping to add in the future reflecting your views, they will be greatly appreciated. Also remember to enter the "Name our newsletter" contest - do we keep "The Eye Opener", or opt for a new name. Send in your entries to raque@sasktel.net or to sk.opticians@sasktel.net. The winning entry will be selected and a prize will be awarded at the Fall Convention. Thank you to those people who have sent in some suggestions and we look forward to seeing more!

Enjoy the Spring - see you in the Summer! Chris ©

FAREWELL TO LIL LAWFORD!

Lil was our Registrar and office manager/ executive director for over 20 years. She was well liked and respected by all that had the pleasure of working with her. Her "gift of the gab" made her special to a lot of our members and colleagues from the national offices often mentioned their lengthy two minute calls to Lil. She really babysat all of the students that went through the courses while on her watch. She had even been criticized for holding off on submissions because some student didn't have their homework in on time. Lil was very in tune with our legislation. Enjoy your retirement, Lil.

CONGRATULATIONS TO KEN SORENSEN OUR NEW REGISTRAR!

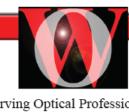

Ken comes to us with over 35 years of experience in the interpretation, application and drafting of legislation, regulations and bylaws; he was co-council on several land mark cases, one of which led to the major reversal on the administration of Customs legislation in Canada. Ken moved from Ottawa where he was president and managing partner of Sorensen & Associates and Sorensen Investigations Inc. where He participated in and directed numerous investigations into matters of malfeasance, sexual harassment and abuse of authority as well as directed investigations on to the systemic causes of work place harassment. He studied law and is a graduate of St Paul's University Canadian Institute for Conflict Resolution in facilitation, mediation and negotiation. He has represented numerous International and multinational firms in front of various government agencies, Tribunals and Federal Court of Canada. Ken is a gifted and experienced presenter and has lectured extensively in Canada and the US.

Get back to work - Be a Mentor - Volunteer

Here's how... If Inactive for under 3 years - just pay your license fees.

Inactive for over 3 years - a request goes to Council.

Share wisdom: Contact Ed. Chairman Sandra Wiebe to match you with a deserving student

Get Involved: Locally - Volunteer your time for upcoming seminars, contact SODA for details.

Nationally - the branding of "National Professional Identity Campaign" needs volunteers for its public launch in May. Contact Connie Chung at cchong@cobc.ca or 604-278-7510

Opportunities: Media Relations / Communication Writers / Website Committee / Social Media / Community Outreach / Public Events / Sponsorship

TAMMY HARTLEY
WILLARD JAMIESON
CANDACE RUNGE
CAROL STOBBE

These volunteers shared their expertise with our Contact Lens students at the Seminar held March 20th & 21st at the SODA office.

They earned Continuing Education Credits for their commitment.

THANK YOU FOR ALL YOUR HELP - WE TRULY APPRECIATE IT!

~~~~~~~~~~~~~~~~

We are looking for volunteers again for the May 16th & May 30th Prep days

Earn 4 CEC / per day

### **UPCOMING EVENTS for 2010**

#### **SODA Dates**

Council Meeting Dates: May 26, September 27, November 26

(dates subject to change)

SODA Convention: September 25 – 26 @ Regina Delta

"What's The Latest in Technology"

AGM Dates September 26 @ 1:00 Regina Delta

#### **International Dates**

October 1 – 3 Vision Canada 2010, Ottawa, Ontario October 6 – 9 Vision Expo West, Las Vegas, Nevada

#### REMINDER!

It has come to the attention of council that unlicensed opticians have been practicing in the province and that members are reminded that all opticians practicing in Saskatchewan no matter what the duration are required to be licensed in accordance with the Act.

## How can you help your contact lens patients with astigmatism this spring?

ACUVUE® OASYS® Brand for ASTIGMATISM will provide clear, stable vision even when your patient is:

✓ playing sports

disorders. Consult your eye care professional for more information.

- ✓ lying down watching TV
- ✓ working on the computer

Exceptional all day comfort • Highest UV protection†

ACUVUE® OASYS® Brand Contact Lenses for ASTIGMATISM are designed with Accelerated Stabilization Design Technology (ASD) which uses the power of the natural blink to help keep the lens in the correct position and rotate less.

ACUVUE® Brand Contact Lenses are indicated for vision correction. As with any contact lens, eye problems, including corneal ulcers, can develop. Some wearers may experience mild irritation, itching or discomfort. Lenses should not be prescribed if patients have any eye infection, or experience eye discomfort, excessive tearing, vision changes, redness or other eye problems. Consult the package insert for complete information. Complete information is also available from Johnson & Johnson Vision Care, Division of Johnson & Johnson, Inc., by calling 1-800-843-2020 or by visiting ecp.acuvue.ca.

† Helps protect against transmission of harmful UV radiation to the cornea and into the eye. WARNING: UV-absorbing contact lenses are NOT substitutes for protective UV-absorbing eyewear such as UV-absorbing goggles or sunglasses because they do not completely cover the eye and surrounding area. You should continue to use UV-absorbing eyewear as directed. NOTE: Long-term exposure to UV radiation is one of the risk factors associated with cataracts. Exposure is based on a number of factors such as environmental conditions (altitude, geography, cloud cover) and personal factors (extent and nature of outdoor activities). UV-blocking contact lenses help provide protection against harmful UV radiation. However, clinical studies have not been done to demonstrate that wearing UV-blocking contact lenses reduces the risk of developing cataracts or other eye

### NEWS RELEASE Ministry of Health Services

#### B.C. MODERNIZES REGULATIONS FOR SALE OF EYEWEAR

VICTORIA – The Province introduced a series of changes today that will modernize the way in which British Columbians get their glasses and contact lenses, and give them more choice, announced Health Services Minister Kevin Falcon.

"After lengthy consultation on some of these issues, and a recent court decision that caused us to take a broader look at all the existing regulations, now is the time to take action," said Falcon. "With advances in technology and more consumers turning to the Internet, it makes sense to modernize a decades-old system to give British Columbians more choice while maintaining public safety."

The Province is giving six weeks' notice that effective May 1, 2010, changes will be made to the regulations for opticians and optometrists under the Health Professions Act, including:

- Removal of most of the restrictions that allow only opticians or optometrists, or workers supervised by them, to dispense glasses or contacts.
- Allowing prescriptions issued by medical doctors and optometrists outside of the province to be filled within B.C.
- Allowing people to order glasses or contacts online without having to give the seller a copy of their prescription, sight-test assessment or contact-lens specifications.
- Requiring opticians and optometrists in B.C. to include in a prescription or sight-test assessment the measurement of distance between the client's pupils, which is required for the proper fitting of glasses.
- Requiring opticians and optometrists in B.C. to give clients, free of charge, a copy of their prescription, sight-test assessment or contact-lens specifications whether or not it is requested by the client and also to give a copy, free of charge, to a third-party eyewear seller or other person if requested by the client.

The initial fitting of contacts to determine the lens specifications will still be done only by an optician, optometrist or medical doctor, or workers supervised by them, using information contained in a prescription or sight-test assessment.

Also taking effect on May 1 is a change to optician sight-testing. Opticians will now be able to independently conduct sight-tests for healthy clients aged 19-65. This eliminates the extra step of having a sight-test reviewed by a medical doctor who then issues a prescription. Instead, a screening process will be put in place to ensure a client is healthy enough to be eligible for the sight-test, and is fully informed about the difference between a sight-test and an eye-health examination.

The screening process will also require the optician to refer a client to a medical doctor or optometrist if the client has a specified pre-existing condition or if certain test results occur. Regular eye-health examinations will still be recommended for all British Columbians, who should consult a medical doctor or optometrist about how often they should have an eye-health examination.

An October 2009 decision by the B.C. Court of Appeal found that Coastal Contacts, a B.C.- based online eyewear seller with approximately 120 employees, is contravening the regulations by dispensing contact refills without seeing a prescription. These regulatory changes will address the court decision.

#### UPDATE ON BC MINISTER OF HEALTH'S PRESS RELEASE

March 24, 2010

I think the correct approach to this update is to start off with several bullet points answering some of the questions that have arisen since Friday afternoon when the Minister's announcement was first made. It is unlikely that the Minister is going to entertain any change in the interim between now and May 1<sup>st</sup>, 2010 so we need to take a look at some of the positives and some of the opportunities.

We are the leadership of Canadian Opticianry and if we express an emotional, exclusively negative reaction to this turn of events to our registrants and members it will be the attitude they carry with them instead of finding ways to make the profession survive and prosper.

This is a huge win for opticians. We are all naturally unhappy with the deregulation of eyeglass dispensing however, we now have a province in which independent optician-performed refracting is within our scope of practice. It was felt that government in BC (and most likely elsewhere in Canada given time) would deregulate eyeglass dispensing so it is a tremendous thing that opticians will have this expanded scope of practice.

We knew that the Minister was going to deal with both the opticians' regulation and the issues raised by Internet sellers at the same time. We were not certain he was going to tie them together in this fashion. At the same time all indications were, during previous conversations with the Ministry that partial deregulation of dispensing was inevitable – if not now then sometime over the next several years. As we know we have been challenged in every province to defend regulation of eyeglasses and it's been getting harder and harder to do so. The OBC met with the Minister of Health just after our Calgary meetings and the COBC has had regular meetings with the chief policy advisor to the Minister. Both signaled that there would be a resolution by the end of March. We did not get a 'heads up' that it would be last Friday.

Was there any trade-off made by opticians i.e. did we sacrifice eyeglasses in order to get refracting? Absolutely not! The OAC, and to my knowledge every other association and regulatory body in the country has been fiercely protective of regulation of eyeglasses. It was ultimately a losing battle because the Internet is not going away.

**Opticians retain right to title.** We already knew that it would be very important for opticians to educate consumers about our value in terms of knowledge and skill. That is why our Licensed Optician branding project is so important. Isn't it great that we're ahead of the curve in that respect?

Opticians will be able to use the results of the automated refraction (now called the Assessment Record) to make both eyeglasses and contact lenses. Previously the draft regulation allowed only eyeglasses to be made.

Only an Optician who has qualified by training can provide an automated refraction and an Assessment Record. Only an optometrist can provide a Prescription.

Only a contact lens fitter or someone supervised by a contact lens fitter can fit a contact lens or supply a contact lens for the purpose of fitting a contact lens. Others who are not regulated may dispense duplicates.

A contact lens fitter must provide the client, free of charge with a copy of any prescription or record or assessment for the purpose of dispensing a vision appliance. This does not mean that the optician cannot charge for the process of developing the assessment. It just means that you cannot charge additional fees if the person wants a copy of the record. However if the person came back some time later – as they often do, you could charge an administrative fee.

The Standards of Practice have not changed substantially since they were originally developed a few years ago with the exception of the following:

Clause 8 indicates that sections 1 to 5 and 6 (a) do not apply if a prescriber who has performed an eye health examination of the client has requested a registrant to conduct an independent automated refraction on the client. This is huge because it means that an ophthalmologist who was treating a diabetic patient, for example and who was satisfied that it was okay for the person to have a new prescription, could send the person along to a sight testing optician to have the refraction per formed.

Clause 10 (a) indicates that the registrant who is conducting an automated refraction and developing an assessment record must also take the person's PD and include it as part of the record. What if you are not providing an automated refraction? Naturally if the optician has not performed an automated refraction the PD would only be taken in the course of making a pair of eyeglasses. At that point the release of the PD would be subject to Federal and Provincial privacy laws. The question has been asked if someone came in off the street and wanted their PD taken would the optician have to take it. The answer to that is no unless they want to make taking a PD a part of their business model. In that case they could charge for the service.

Initially the Standards of Practice did not allow opticians to provide refraction for those who had prescriptions over 10.00 dioptres. The new regulation limits that to 6.00 dioptres. It seems clear that it is a starting place and after safe practice has been demonstrated we can go back to the Minister for a modification of the regulation. (It is our understanding that in BC the Minister does not have to take changes in regulation back to caucus as if the case in many other provinces but instead can implement a regulation on his/her own initiative.

The previous Standards of Practice required that the candidate for refracting have had an eye health examination within a restricted time frame. The new regulation uses a standard which references the COS recommendations:one eye health examination since attaining the age of 19 years or, if the client is 40 or older has had one eye health examination since reaching that age.

The OBC: Opticians of British Columbia and the OAC will be submitting a consultation paper based on risk of harm. It is assumed the COBC will also be submitting a paper.

Both the OBC and the COBC will be meeting with the Ministry in the next few days to clarify the meaning of the new regulation. We will keep you advised of any emerging information from those meetings.

There are many models of business that can be innovated to sustain the profession. The urgency for this is clearly in BC. If we believe that this change marks a trend for other provincial governments, we at least have time to shape those models and be prepared.

Mary Field, Chief Administrative Officer, OAC National Affairs.

### A MIRACLE OF SIGHT

#### DOCTORS IMPLANT TOOTH IN BLIND WOMAN'S EYE

Lending a whole new meaning to the term "eyetooth," Miami surgeons have implanted a tooth in a 60-year-old blind woman's eye, using it to anchor an artificial cornea that has restored her vision, lost for nine years. "I'm looking forward to seeing my seven youngest grandchildren for the first time," said Sharon "Kay" Thornton, who was blinded by Stevens-Johnson syndrome in 2000. The rare, serious skin condition destroys cells on the surface of the eye, causing severe scarring of the cornea that prevents a cornea transplant or use of a conventional artificial cornea. After an attempt to correct her problem using gene therapy failed, Dr. Victor L. Perez of the Bascom Palmer Eye Institute at the University of Miami's Miller School of Medicine decided to try an unusual procedure called modified osteo-odento-keratoprosthesis that had been developed in Italy but never tried in the United States.

Earlier this summer, Dr. Yoh Sawatari, an oral surgeon at the Miller School, removed one of Thornton's canine or "eye" teeth the pointed teeth in the upper jaw, so-named because they sit directly beneath the eyes--and the bone surrounding it. Technicians shaved the tooth and bone and sculpted it to the proper shape, then drilled a hole through it to insert a cylindrical optical lens. The combined tooth and lens were then implanted in Thornton's shoulder to allow them time to become fully integrated.

Meanwhile, Perez prepared the surface of the eye by removing the scar tissue surrounding the damaged cornea. About a month later, moist skin from inside her cheek was used to cover and rehabilitate the surface of the eye. Two months later, around the beginning of September, Perez removed the tooth from her shoulder and implanted it in Thornton's eye, carefully aligning it with the center of the retina. A whole was made in the mucosal material from the cheek to allow the lens to protrude through and collect light.

When the bandages were removed from Thornton's eye on Labor Day weekend, she was able to recognize faces within hours. Now, two weeks later, she is reading newsprint with a visual acuity of 20/70. Doctors expect her vision to continue to improve as the surgical scars heal.

The procedure was originally developed in 1963 by Italian ophthalmologist Dr. Benedetto Strampelli. It was not very successful initially, however, because of serious complications--such as the tooth falling out of the eye. Modifications by Dr. G. Falcinelli of Italy solved those problems, however, and the procedure is now used in Europe and Japan--albeit rarely. Perez traveled to Rome to learn the technique from Dr. Falcinelli.

## SURGEONS PRESCRIBE CONTACT LENSES FOR INFANTS TO CORRECT VISION

Infants as young as one-month-old are prescribed contact lenses at pediatric eye surgery centers so their visual system will develop correctly. Infants may be fitted for contacts if they have had cataract surgery, need extremely high-strength prescription glasses, or have very different prescriptions for the two eyes. According to Dr. Natalia Uribe, who directs the Contact Lens Program in The Vision Center at Children's Hospital Los Angeles, "The brain's visual system is not fully mature until about age eight. It is critical that infants and very young children with eye problems have their sight corrected so the visual pathway develops properly. Otherwise it may not be possible for them to enjoy normal vision as an adult." According to Dr. Uribe, "Many of the children I see have a medical condition that affects only one eye. Wearing glasses with one thick lens and one clear lens will not work on very young children. A properly fitted contact lens can produce near-normal vision - the images are the same size, clear and focused, and input equally from both eyes - spurring proper brain development." For example, if an infant is born with a congenital cataract, the lens inside the eye, which is used for focusing, is cloudy. Vision development in that eye is blocked, leading to amblyopia as the child grows. Lens implant surgery does not work for very young children because their eyes are growing so rapidly. Contact lenses are the preferred choice because they can be refitted frequently and they provide more natural vision than lop-sided cataract glasses.
